

## **Advisory / Project Implementation**

### **Transportation Master Plan in Dali, Yunnan, China**

SCE was approached by Dali Municipal Government to deliver an integrated Transportation Master Plan in Dali, Yunnan. This request came from the Vice Mayor who was in Singapore during the study visit for the China Association of Mayors (CAM) in 2012. He was interested to understand how Singapore, with our current transport system is able to regulate our high traffic flow rate efficiently.

SCE and Dali Municipal Government subsequently entered into a contract in 2013. The signing took place in Dali City.

For this project, SCE worked with CPG, a company which specializes in infrastructure & building development and management services, to macro analysis and review of the major road network connecting Dali and six adjacent cities and towns in the Dianxi region, also provide recommendations for alternative modes of fast and efficient transportation systems to support the city's growth, to review and recommend the types of core transportation systems as well as an integrated transportation master plan for Dali City. This project has been completed in early 2015.
